SEVERE MISCONCEPTIONS

Over the past few months I have been on the receiving end of a number of letters, e-malls, passing comments and general lealous innuendo regarding what I do for a living. Everyone seems to think that the life of a magazine editor especially that of a gaming magazine is simply put, as far into the butter as anyone can get. Afthough I have to lay a little blame at my own doorstep for this situation (after all if someone tells me how great tive got it, disagreeing with them is a tough thing to do), I suppose at the end of the day it's an ego thing. An ego is a dangerous entity and is often fed and nourished by nobody other than yourself until II becomes bigger than you are, leading to delusions of grandeur and opinionated speeches at every opportunity. Now, enough about my problems and on to the subject at hand, I get mails from people who want to review games for a tiving, it seems that the idea of being able to play games at work and get paid for it is everyone's definition of a perfect Biestyle. But it's not like that at all...

Putting together a magazine is a time consuming process that always ends up running late no matter how well you plan and prepare, tast minute information simply must go in the issue even if it means having to write an article through the night to meet the morning's deadline. One week of every month is spent putting the finishing touches on another great issue, tale nights and early more inds seem to blend into each other and when it's finally over you have to start everything all over again. Like a snake eating its own tail, we are forever chasing something new and exciting, the latest and the best for our readers. Disting all this we never stop to look at what we've left behind in our mad and frenzied wake. One important area we also seem to lorget while we're so busy chasing after the perfect issue are our relationships. Yes, our poor wives and girlfriends who really can't understand what all the fuss is about, it's only a game they'll say, wen't you a little old for this kind of thing they'll ask? Barely raising our eyes up over our glowing monitors we'll say, but it's work. This is all leading somewhere and like everything it has a good side and a had side. You might even recognise these symptoms in your own life. The nineties has given birth to a new culture, one where you spend more free time playing computer games than anything else. This has moved a long way from spending the entire day in front of a TV watching rugby - same problem, different media. The good thing here is that we are interacting with something instead of just observing it, the brains are now working instead of slowly shutting down - it's a great way of life if you can somehow get your other half bivolved. Successfully easing your wife or girlfriend into playing games will ensure a happy home environment, the only thing that might initially suffer is your bank account - for that new ladses model PlayStation or PC. This is the trick to surviving the new éra - curiosity always gets the better of most people and once you've got them hooked they'll never leave... This of course doesn't apply to any of our female readers, don't worry though if this sounds like a maje bonding thing - I'm really just trying to get everyone playing together nicely. This talses a few questions like, are women potentially better at playing games than men! I think that given enough time and interest the multiplayer battle grounds might end up littered with more bodies of male players than females. So if you are reading this magazine while your husband/boyfriend is whiting the hours away in front of his computer stop now and go and have a look, it's more fun than you think

A GOOD SEASON FOR DAMING

Well its finally happened, the new release drought is over 1 don't asually bore people with the contents of the magazine in this space but once you've provised through the pages you'll discover that the big ones are starting to arrive, Looking at the list of games due for release right after this issue is swapped up will put a smile on any one's face. The lead up to the big Christmas period starts here, late in August. All you have to do now is sli back and enjoy the ride. Long live Gaming. NEW AGE GAMING

ELECTRONIC ARTS MAGIC

Electronic Arts and Wixards of the Coast announced an agreement to co-operatively develop a new intellectual property and online computer game. The game is still a long. way off, but from what our sources have incovered it's going to be on Internet based strategy title. The software will use digital trading cards similar to the paper cards used in Wizard's Magic: The Gathering series. The cards can then be sold and traded over the Internet. Rumour also has it that Maxis will be developing the game

Want News Release

UNREAL ENGINE FOR PLAYSTATION 2

You know the PlayStation 2 is going to be something special when companies like Epic make statements that they are currently coding and porting their Unreal engine technology over to the PlayStation 2. This news goes a long way to answering some of the questions about the PSX 2 and its role in the 3D-action market. Tim Sweeney had a few comments to make about the press release saying that Epic was currently in the process of acquiring a PlayStation 2 development system [step decoling). The team at Epic are now continuing development of the Upreal Tournament engine and when they get their development system from Sony, they'll start porting the code over to the new platform. The way things are look-

server. The guys at Upic oren't going to release Lerest Tournament on the new machine but are rather going to develop a new game that might be based in the Unreal universe. At the end of the day this means that developers for the PSX 2 will have a capable engine to work with thus avoiding the time consuming and costly business of serting their own 3D engine. provided they are prepared to pay the engine licensing fee. This practice is as common as grass in the PC development environment and saves valuable development time that could be better spent on pure creativity. In addition, this kind of technology will facilitate the portion across plattornes, which means we'll be seeing the same games on both systems appearing much faster. We at Nag personally feel that only the next generation PlayStation 3D engines will be ones that will get people excited, but then again Urroal isn't a bad place to start. Tim Sweeney could not be persuaded to release any further details about all the exciting features this new ongine will offer, as everything is under wraps with numerous waterlight non-disclosure agreements. What all this really means, is that you should start seriously saving some cash for a PlayStation 2

56 MILLION FOR SONY PLAYSTATION

Cumulative global shipments for the PlayStation have risen above the 56 million mark in May this year, up from 50 million last December from its first release in December 1984. The main area of growth has been from the European community, Good nows for investors, but even better news for us gamers out there is that the new Sony console will be unveiled in a prototype case on 17th September 1999 at the Tokyo game show in Japan, said Ken Kanaragi president of Sony Computer Entertainment Interactive. The final retail release should hit Japan on the 3rd December 1999 exactly tive years after the original inal PlayStation was released. This means that the rest of the world will only see the conside towards the end of 2000. A number of games have already been appounced for the new console. Information is scarce at this stage but we have confirmed that the next Metal Goar from Konami, the next Rosideré Evil from Capcom and other untitled racing and fighting games from Namco and Square have all been listed. When this console hits it's going to cause quite a stir in the gaming community. PlayStation and PC able.

NABOO STARFIGHTER

Some good news for owners of the PC version of Rougue Squadron, Lucas Arts has released an arbicon for this popular game that allows gamers to fly the Naboo Starfighter from Star Veacs Episode One: The Phantom Menaco. The Naboo Startighter is highly agile, with rapidfire twin laser cannons, boming missiles and other weaponry. The startighter's "advanced hyperdrive engine and superior handling characteristics" will allow players to rapidly outmanueurry their dreaded foes. TOMB RAIDER 4 PLAYBOY

The Fourth Corni

Returning to its roots for the fourth iteration, Tomb Raider 4: Last Revelation is dropping the combat and action for an adventure approach, similar to the original game. No longer will you have to face endless bad guys and monkeys but rather you'll be encouraged to explore and solve puzzles. So far we know the game is

being developed for both the PC and PlayStation but the location is still a closely guarded secret. Eidos aren't saying anything and the only clue that there will be a foorth game was a small insignificant entry on the company's release list.

THE MATRIX STRIKES BACK

For obvious reasons the movie, The Matrix basattracted almost as much attention as Star-Wars Episode 1. The good news for lans of the Boil movie is that you can now look forward to not only one sequel but two. The deals bare already been signed and we will definitely be seeing the sequels seen. The creators of The Matrix said that the original concept had always been to create a trilogy. Even better news is that the two sequels will be released shortly after one another. The only thing they haven't decided yet is if the two new movies will take place before or after the original. Keomi Reeves will be starring in both the new mortes, which are going into production now in Australia. The new movies have imaginatoyely been tidled Matrix 2 and Matrix 3. So. what has this got to do with computer games? Well rumour has it that the first game is ourrently under development, and that is all we have for you now, as soon as we hear more details of this exciting development you? SPEEDBALL 2100

Many thought the day would never arrive, but it has. The best alternative sports game ever, Sponthall is making it's way to the PlayStation, early in 2000. The game was released many years ago on the Atari and Amiga and became something of a classic. Players select one of 16 Speedball teams and are charged with loading them to victory in a series of tournaments and leagues. Played within walled arenas, Speedball is a frantic sport wherein teams of twelve muscle bound into their opponents' goal. Anything goes asplayers weave intricate passes together, use line and attempt to slam the ball past heavily armoured goalkoepers. For safety reasons, each player is required to wear padded suits. perfecting long shots at goal. What do you mean?

Circotings, Lalways read your magazine from cover to cover every month and love every minute of it. I have a question about the terms you use sometimes and your abbreviations for things. Here are some of the terms I'm not sure about I know Al moans artificial intelligence but what are clipping problems, logging, pop-up syndroppe, I had a longer list but I can t remember them all now Please let me know, as I'm sans other readers out there would also like this information. In the reviewing bible these terms are all explanted in depth but for this formy I'll condense flor entries for easier consumption. You are perfectly correct about the Al thing. although the term artificial intelligence is something of a contradiction. Clipping refers to the graphics engine's ability to make solid objects behave like solid objects, the morsiexample of ellipping seen to date was in Tomb Raider 3 when our levely heroid terminology in each remen we'd need disappeared from ourse after accidentalan extra len pages all together. to sole-leaving total a wall. The previews and reviews seem to improve overy month and the rest of the magazine is worth another Took at. All in all worth the R18.95 thousands of South Africans spend on it monthly. Or is it? Physical Violence & Cricket

The Ed's Note in the May issue is spot on. Having played numerous computer games (a lot of them first person shooters) I have still not had the urge to go and shoot anybody in real life. I don't and have never possessed a fireman and have never committed a violent act. How people can seriously believe that a game like Doom can drive a person to actual physical violence is almost laughable. If that were the case then not only me, but also millions of others would be certifiable prison cases. In fact, as pointed out by the Ed, these games offer a form of escape (stress reliever) and do more to prevent rather than encourage violence. After all you are the good guy saving the world in most of the games on ofter.

I recently bought my copy of World Cup Cricket 99 before NAG had reviewed the game. Having played Brian Lara Cricket for a while I must throw in my 2 cents worth on WCC 99. The game to me is a bitter disappointment after the brilliance of S8K. It is so obvious that EA Sports shipped this game to meet the World Cup deadline. The graphics are excellent as is usually the case with the latest EA sports games but the playability of the game is pathetic, My 10-year-old daughter after one hour at the game had it taped. She is able to bowl out any side below 20 runs with the difficulty level at its highest setting. Having showed me the ropes I am also able to achieve this with little effort. Can we honestly believe that Kenya will bowl out South Africa for less than 20 runs time and time again at the 99 World Cup2 Ball after ball you are able to run in, bowl in the same spot and the poor old CPU batsmen would play the same shot to the same fielder standing in the same fielding position. Result - all 10 batsmen caught out in the same fielding position. (Why is it always mid off?). Now that a not a playable PC game. What a yawn after you get over the disappointment. I cannot believe that this game was proper ly tested and fixed before release. As an honest game player I rate Brian Lara Cricket a far superior game to WCC 99 (apart from the graphics). Who needs great graphics with no game play? I broke my one golden rule of never buying a PC game before trying a demo or reading a review from a credible game reviewer. Never again!

Jonathan Moon

I was just starting to think that I was the only one around here who thought that the idea of computer games inciting violent behaviour was a vidiculous notion. It's good to know that I'm not alone, let us stand up and be counted - so far two. Does anyone else out there have an opinion on this topic or is it just one and fonathau? This months challenge is for a head do. tor to write in and share with us a professional point of were or perhaps a new way of looking at the problem. I'm also sorry to hear about your disappointing experience with the cricket (it hasn't been a terribly good year for this sport it seems - sorry I didn't hear that, please scream again.). You really should have known better, next time read the review first so I won? base to say - I told you so, Maybe your free copy of Dungeon Keeper 2 will make the whole agly medent just go away.

When you buy a new game, usu usually play it for a while and then say, damn, if only they had done this or that I have definitely said this about a few games before. Well here it is, the last part of our look at Ronami, it's hard to imagine how far they have come since their humble beginnings. Last month we ended off with the massive success they had with Teenage Mutant Ninja Turtles and now we'll see how they went from this to Metal Gear Solid.

fter the HUGE success of the Turtles, A Kenami took a well-deserved break from the areade business. Not releasing any new fittes in 1991 rather concentrating on rehashed versions of old games. Not surprisingly 1991 saw Konami suffer its biggest financial loss in its gaming history.

Early 1992 saw Konami returning to their old ways in releasing top titles. Relying again on its strong licensing team. Konams snatched the deal

to release an arcade game based on The Simpsons, which is just beginning to achieve fame. Like the compamy's barrier title. TMNT, The Simpsons was positioned as a four-player sidescrolling beat-emup allowing players to use Marge. Homer, Bart, and Lisa simultaneously in an adventure to save Maggie from a mysicnous evid kidnapper. (Losing her pacifier, as Homer bomps into a jess effer outside of

lost. She is

KONAMI

carried away). Because Acclaim socures home rights to produce Simpsons titles. Konami never released a home translation of the arcade game, which is arguably the strongest game holding The Simpsons license. Another key title Konamis released in 1992 was Sunset Riders, a Western-

theme walk-and-shoot game that textured elaborate cartoon artwork and appropriate audio, and which, like TMNT and The Simpsons, was a four-player title designed to suck in quarters. Well I guess that's about it ... Well almost! In 1993 Lethal Enforcess was released to be the company's strongest arcade title in 1993. Capitalising on improvements in photograph digitisation technologies, Konami makes this the most realistic cops and robbers game vet, placsing one or two players in the first-person role of police officers who are assigned to blowing bank robbers to bus, with lots of blood and gore

all over the screen. Players could absorb several bits before being taken out of the action. Making the action more complex was the inclusion of hostages and other clearly innocent civilians trapped in the middle of the gunfire, and the player is forced to take our only villains

while sparing the lives of the hapless (and often bazardously placed) good citizens. I must say I could never hit the woman held. by the masked lad in the bank, so I used to blow them both to smithereens. Somehow I

think this game could go down well in It III at the noment. interestingly enough in 1905 Konami was asked to produce a similar simulator for the California Police Dept. that was used for combat and mergency training With the birth of the PlayStation in 1994 a new market in gamng opened up and by 1996, Konami was Firmly entrenched as a

PlayStation developer and supporter, preferring the system to the Saturn (which seems not to be keeping pace with Sony's new machine). Yet, when Matsushita (Panasonic) acquired the 3DO's M2 dupset for a new game console,

Konami surprised everyone by announcing

that it would develop arcade. games based on the M2. rardware with possible some versions to follow. Mysteriously noting that the MZ will be used in their arcade line-up for inexpensive titles demanding a reasonable amount of power. Nintendo announced that its long-awaited console will furally be coming to the market, but that the name "Ultra 64" has been changed to Nintendo 64 for world-wide release. Information suggests that Konami, which and wisely and iromically trademarked Ultra years earlier when Nintendo decided to restrict the number of games that one company could pro-

ANIN

sluce), was approached by Nantendo to turn over the 'Llitta' name.

70

Konami declined - with that name, it could be the only company permitted to release Ultra-Football, Ultra Soccer, Ultra Baseball for the system, names so powerful that they would sell cartridges even without any promotional effort. The

name was changed, and konami's plans were scrapped, but not for lack of trying. Konami has managed to stay abreast of things in the gaming industry with their latest release being Metal. Gear Solid for the P5X. Most recently rumourshave been flying around that Konami has signed an exclusive deal with SEGA for a huge development deal on the Dreamcast but SEGA has remained fairly tight-lipped about it all ... I wonder why!

ITE A WRAP

And there you have it, as brief as possible, the gaming history belaind Konami. So when next you see an old Yie Ar Kung Fu or a Pengo, spare a thought (and maybe a 50c) for the gives at Konami who made it all happen! Until next

So many people think all monitors are created equal, unfortunately this isn't the case, the differences between monitors is usually found in their specification. Most people tend to look at the monitor and make a purchase decision based on the look and never take the specification into consideration. At the end of the day a low-end monitor can damage your eyesight and even cause headaches in some people. I will detail what to look out for when buying a monitor and explain what their functions are so that you can make an informed decision.

This month we discuss monitors so you should be well on your way to making informed purchase decisions for buying a new computer or simply upgrading your existing one. When it comes to monitors, buying the cheapest will cost you in the long run and you need to find a monitor with the highest specification at a reasonable price.

Eidoe's bulging catalogue of games holds no boundaries. What with the recent release of Braveheart, and the news of David Bowie working with Eidos on a new game, it appears the company is looking to expand and give every game a cutting edge or lead over their competition. Although you might see some of their licences as glounicks, the actual games are rock solid and move the genre forward. Bidon's use of technology and licensing is the perfect mix to give a game added appeal, of

RE-VOLT (DOM: NUMBER)

PREVIEWS BROWN CONSTRUCTION

Anyone who attended the E3 Trade Show in Los Angeles would not have failed to be impressed by what many saw as one of the neatest and most visually impressive games on show Although at the time it was only a sneak peak it left a lasting impression. Re-Volt, based around remote controlled cars, is a game that has some strong ideas as well as a slick look. Programmed by Probe in London, Derck dela fuente met with the team to see how the game was progressing.

THE RESERVE TO THE PERSON NAMED IN

REST FOR THE WICKED.

The quaint little town of Dewdrop Cove lies nestled in a field of whispering grass, dotted with happy cows. The people of Dewdrop are happy and content, sate behind their cottage pane windows. Like a rush, nail being driven slowly through your skall the de ightful sound of the dren's laughter sickens you to your rotten core. The time has come to put an end to this merrement and joy as you must find it within your brack heart to forfure the locals, blacken the ground and slaughter every last soul Dewdrop Cove must fall

There is something about fantasy that spurs the imagination and excites the mind just think of it. Vast armies gathering beneath growing storm clouds, orcs against men, trolls against elves, while overhead great dragons wheel and breathe out great gouts of flame. Ah yes, the worlds of authors like Tolkein, Feisl and Eddings., these are places where we can lose ourselves and leave the troubles of real life behind it is there that men are men and small green creatures generally get squished for the greater good. It is to these worlds that millions of fans around the world flock with warming regularity, and return tune and again. Little wonder, then, that the fantasy genre is so big in the world of PC gaming.

Each of these filve races (including the Human Federation of Planets) seeks to carve 🗯 nice amples in the palaxy. Beyond this, however, there is no real story-line, and resampaign made - every. game is just a gaint? (skirmlah-style), whether

Any of the five races mentioned above may be played, and each has its own particular game play advantages and characteristics. The Pederation excels at diplomacy, and thus finds creating heaties with minor races much sessen. The Klingors respect honour through victory is hattle, and as a wartier society, gain certain mumbat bornses. Only planetery, systems containing at least one Terran or terraformed planet may be colonised, and if no such planet is present, at least one of the planets comprising the system must be term-formed. Resource management is of paramount importance, as in any strategy game. Credits (cost) are a staple enough resource, and mat that can be stockpiled. Other amounts include Research Points, intelligence Points (for covert ops) and Dilithium as empire-wide resources, and Food, Energy, Population and Industry on the planetary system level. These resources must be carefully juggled in order to succeed. Diplomatic negotiations form a vital part of this game, Establishing good-will treation allows trade reutes to be established, which generale income for both parties concerned (the exception to this are the Ferengi, who need not necessarily have a treety in place in order to trade). I have counted but misor reces so fee, on top of the five sejar ocus. I was shocked, at first, to issue how quickly the Al player gets up to speed and altacks you by military might. This forced me to rethink my strategy, and I sound that economic development on its own would not suffice, as, armed conflict out happen at any time. Of course, the more developed a planet is, the quicker it can build anything (including star) ships and planetary defenses). Planetary defences are, on the whole, not as strong as the should be (after all, they do have an entire planet to be mounted only. A combination of sta siring and troop transports are required for n successful investors, while ster ships complemented by planetary defences should

Once combet begins, you will be taken to a tactical combat screen (unless you chose autocombat; however, auto-combat does not fight; very imaginatively). In this view, you will see a (must or less) three-dimensional representation of space and the star unips and other objects it contains. Orders can be given to the star ships, detailing what attack or defence made they are to use - should they charge straight up, circle and haram their opponents, avade lim, or retrest allogether. As in the strategic view, combat is turn-based, and once you have bessed all your orders, you may signal for the lurn to be resolved. At this point all orders are interpreted and applied to the current situation. Weapons may flow, ships will move as directed (though numember - you do not have direct control over the shipe' actions - the ships' captains decide be details, according to your orders) and damages. will be resolved. There is currently little leader mation available on the mact details of the ampine except for the specifications published to the Internet. Suffice to say that the engine is fast

with unique features that easily compare with the big boys of 3D out there - namely the Qualte 2 engine and the Urreal engine Graphically the game offers an interest silve experience with an engine that has over 1000 palygens to represent the characters. As you can well tenging the

characters are well detailed and the hartering artists did an excellent job on the skizu of these characters making them as close to the originals as possible. The level design could have been more vacied within the gallie and seems to lack imagination. The multiplayer levels lake place mostly in in-deed involvible are resul-niscent of the second Alien film. It seems that Robellion must have loved the second film.

First person shoeters are probably amongst the top three genree of games when it somes to popularity. Driving simulators are also probably way up there. But how does one compete with the Quakes and Need for Speeds out there? These games, and others like them, have pushed the limits, making it almost impossible to break into the market without being compared to one of them, and generally not performing favourably in the comparison. This is a difficult question for devalopers to address. The key to everything is originality. The few games that make it out alive are the ones that approach these genres with a new way of thinking. Redline is that kind of game. As a first person shoster, it measures up fairly well against the competition, while so a driving simulator, well, it's sort of Carmagedden revisited. Wait a minute. A first person shooter AND a driving simulator? Yep. Two for the price of one, baby! breaks kid - you just have to learn to live with it. You'll certainly die if you don'the

The bulk of the game fulls into the category of first person shoster, with your characters: running around various beautifully modelled levels and killing the opposition with one of ten weapons. These, too, are beautifully hundled in terms of graphics. Assault rifles, rocket launchers, plasma carrious, uniper rilles - they're all here, and fairly casy to find within the game. Actually, all you have to find to the amms required to, fire a particular type of gue and, key, presto, yau have the gun.

Infogrames made a risky choice by acciding in use Voxel technology to build their game impice, instead of polygons, the Venel engine uses volumetric pixels, which can be described in they building blocks. By putting these blocks tegether, a highly detailed and rich environment can be precluded at the cast of Silacceleration. This is turn requires quite a linely computer to run, but results in Octonic having maybe the most beoutful and detailed environment ever found on a PC game, no jokes here. The engine features software bump-mapping, adding very convincing shad-ows as curves to the characters, and at times I had a hard lime believing that no 3D was speed to conder the graphics. The water effects in Outcost makes water found in Unreal look like pooridge, while fire, explanious and sunglett must be seen to be bulleved. The approach Infogrames took for Outcost definitely pays off in the viewel department.

When it comes to cartoons. Warner Brothers seems to have the formula for short, punchs, and oproamously formy shows down pat. Paining anvils, bumbling villains, toiled schemes and Acme Products all add to the enjoyment of some of the best loved carloons and cartoon characters in the world. It would only seem fitting that the icon of Warner Brothers' cartoons, the urepressible Bugs Bunny, should appear as the hero of a Playstation game. the Livel experience.

I t seems that the music industry is enter-ing an evolutionary cycle yet again. First it was Audio CDs and now we might be facing a change to MP3 CDs. The popular audio compression format MPA is gaining more and more support as time goes by and the first dedicated devices for playing audio stored in the MP3 format are starting to

appear on the market Correctly there are only portable MP3 players available, but there are rumours circulating about dedicated players for use with stereo systems in development as well. We will just have to wait and see if those make an appearance. but for now we take a look at the latest portable player from Creative Labs called the NOMAD.

Since the appoincement several months ago audiophiles everywhere have been lookine terward to the release of the NOMAD. There are currently two versions. of the pertable player available - a 32-MB version with lesser leatures and a 64-MB vecsion. Only the 64-MB version is currently available in South Africa and can beconsidered expensive at a retail price of R2399 OD. II is however feature packed for the price. The unit is capable of playing back MP3 audio files, which is its main function. but beyond this it offers FM radio reception and the

ability to record

voice messages. The unit can also fill the role of transporting files since you can upload and download any file format that your heart desires. The

NOMAD alas comes with 2 rechargeable batteries and a docking station. which plugs into your parallel port to make transfer easy and painless as well as the software necessary to contral it from your computer. I do have one comment on the docking station though. Why didn't they use a passthrough cable instead of a standard cable? This makes it necessary to keep changing between your docking

station and printer the whole time should you also have a printer. With a pass-through cable they could have prevented this problem and allowed both the dock-

ing station and printer to be plugged in simultaneously. Other than this the ducking station is a great idea and even allows you to reclurge the NOMAD's batteries while it is docked, which is quite often considering that they only last for 5 hours while playing

VOLUME 2

GITAL AUDIO ANYWHERI

What makes the NOMAD attractive is its stylish looking magnesium grey case that is small enough to fit almost anywhere measuring only 58 x 85 x 17 mm. It reminds me of just how far we have progressed over the last couple of years to make such a small item capable of so much.

The 64-MB version, as its name states. ships with 64 MB of RAM for storing MP3 or other files 32 MB is located onboard within the unit and the additional 32 MB comes from a small flash card that slets into the back of the unit. On 64 MR you can fit roughly about I hour and 20 minutes worth of CD quality (128Kb/s) MP3 files-You can purchase additional flash eards for storing files and this makes it easier to corry the front side. The information displayed are only the basics namely battery life, the song currently being played and the number of the song being played. When in FM mode the display shows to what frequency it is tuned to e.g. 98 00 FM for Radio 5. The NOMAD can pick up any radio station 88 MHz -108MHz range, which covers all

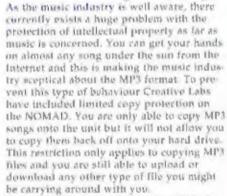

> EM stations in South Africa-Up to 10 frequencies can be assigned to channels so you can find them easily without baying to tune the NOMAD all the time. Another interesting feature

of the NOMAD is its ability to act as a voice-recording device and as such could he used to dictate notes to a secretary or just for reminding yourself of tasks to do even do

Interviews with. We tested the voice recording and it averaged at 240 KB per minute, making it possible to record up to almost 2 hours worth of voice, not to mention that the recordings are clear and comparable to dedicated tape recorders.

For different types of music, e.g. Jazz, Techno, Rock etc., the NOMAD ships with a

built in equaliser that can be set to 4 different modes to enhance the music. It is unfortunate however that you cannot specify your own equaliser settings and have to use the pre-programmed settings.

Overall I am impressed with the NOMAD and would rate it the most feature packed portable MP3 player on the market, even if t is a little pricey. I am considering buying one for myself to listen to all my MP3 songs while I am on the road, and would recom-

this is cumbersome and they should have had the cand auto detect what AGP support is available on your motherboard. The Viper V770 Ultra is slower than the Voodood 3000 and Creative Labs TN12 Ultra, but you can expect it to last longer due to AGP

texturing support and the 32MB of RAM than the Voodoo's 1000, which will be needed for future games. On the other hand it is comparable to the Creative Labs TNT2 Ultra where the chapset is concerned, the only difference is that Creative used faster memory on their cards and is therefore roughly 10 FPS

faster than the V770 Ultra. The V770 Ultra also supports textures of up to 2045x2048 and 32 bit rendering, what it does lack is the TV output of the Crestive FNT2 Ultra and the Voodool WEIL

This month left shorter than most, largely due to our organisation of the Worland competition, which were quite well and seemed to finish too soon. The competition was definitely a learning curve for us and there will be some changes made when we host our pest event. One example would be not to host two competitions on two totally different games on the some day. Other than the competition, I must say that this month presented us with some spectacular titles such as Dungeon Keeper 2, Aliens versus Predator, Driver Outcost and a few more. Each of them is worthy of their individual scores and very entertaining to play. Overall this month has been good to gamers and I hope that the titles keep rolling in-You can never have too many games to play, although you might be forced to come up with new excuses to play all of them. Just call in sick and have a fragging session with the GP while he signs your sick note. I would like to inform you that our Editor has been smitten by the Misbess in Dungeon Keeper 2, and our Editor-In-Chief has recently developed a craving for the illegal with

I do have an update on the comic strip that was supposed to be in Send Off by now. It is coming and the draft versions are being drawn up even as I write this. It might even appear as soon as next month. The Editor just needs at least 4 strips in reserve before he will allow me to publish it. Apparently the strip will be based on New Age Gaming employees or should I say, exploiting their habits for comedy, I wanted to look like Darth Maul in the strip but apparently I am not aggressive enough to justify this. I think the artist will agree with me once he is released from the intensive care unit.

This month we are also saying farewell to one of our employees who is returning to George in the Cape from where he will continue development on an upcoming web site. It was great having you here Errol and I hope

that you still come visit us Johannesburg People every now and again.

Here They Are, But You Never Heard It From Me...

We've already geared up [Sigh - Ed] for this smash title, so it'll definitely be in the next issue provided we can get away from playing it long enough to write it. Our special reviewers kit for this game includes a set of earenuffs - a 'get yourself a tuff attitude' guide book and a baseball bat with rusty nails. Take to the streets with a lead pipe and a foul mouth or this new first person slugger from interplay, but watch out for the 18-age restriction.

Since the dogs of war have become kind of mangy and long in the tooth, it's time for the robots to take over. Machines lets you build an army of robots, research and improve them, and then blow away your encours in three exciting view modes. So make sure your spark plug supply is full up, and that you get your forque weench back from your brother - it's time to rumble!

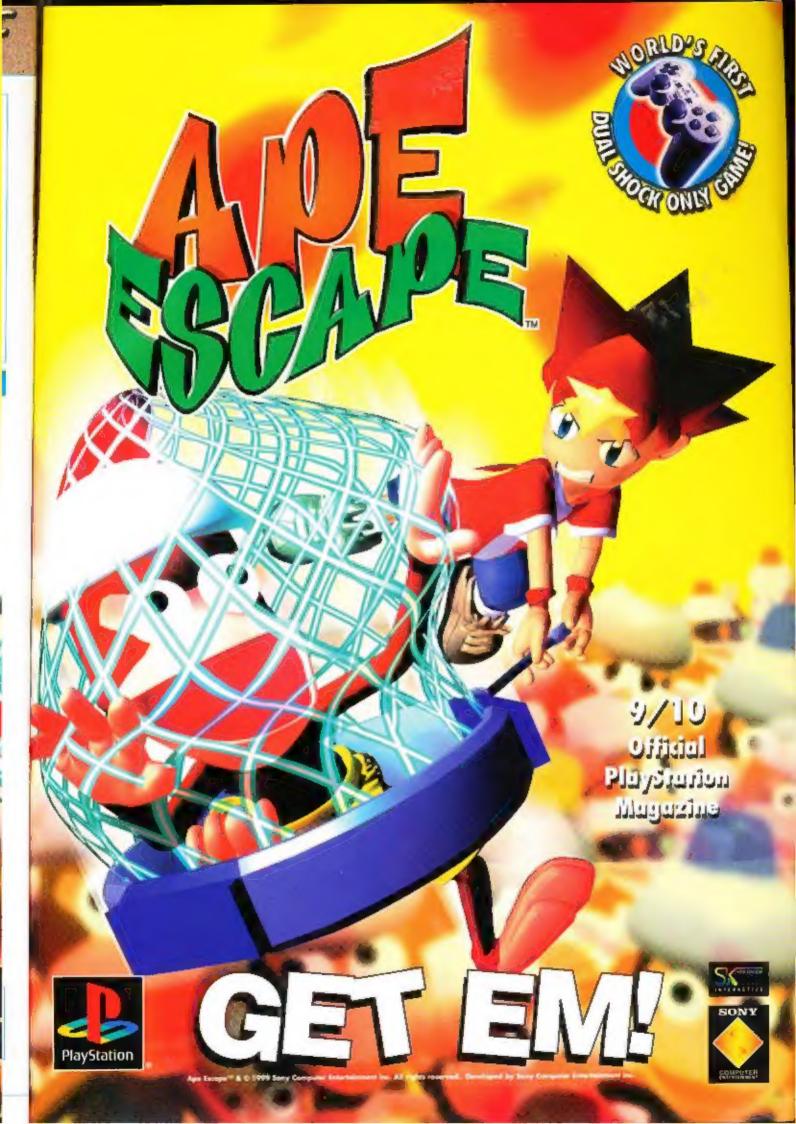

Promotion of violent crimo is big next month, with yet another gang-related game on the market. At least this one is farmy, and all the had language is bleeped out. This is a management game with a difference, and the biggest management problem will most likely be managing to pull yourself away from the keyboard.

Till next month, it is time to get my buff kicked by Warren again in the new Quake 3: Arena test that was refersed, I just have to beat him on at least one level, just one!
